## Enrollment steps

**1st** → [my.cpm.org](https://my.cpm.org)

The screenshot shows the my.cpm.org website with the following navigation menus:

- Learning**
  - eBooks
  - eWorkspace
  - Assessment
  - Parent Support
- Professional Learning**
  - Professional Learning Portal
  - Event Registration
  - Podcast
  - CPM Teacher Wear
- Account Management**
  - Try New eBook Licensing System (NEW)
  - eBook Licensing System
  - Shop
  - Use Enrollment Pin
- Support**
  - Knowledge Base
  - Teacher Tutorials
  - Student Tutorials

**3rd** →

The screenshot shows the CPM enrollment PIN entry screen. It features the CPM logo at the top, followed by the text "Enter Enrollment PIN". Below this is a four-digit PIN input field with a cursor in the first digit. At the bottom, there is a green "Enroll" button and a "Cancel" link.

### Steps to enroll in eBook:

1. Go to [my.cpm.org](https://my.cpm.org)
2. Click "Use Enrollment Pin" under Account Management
3. Enter the enrollment pin (**In public chat**)

**2nd** →

---

# Opening

## Outcomes

## Participants will:

Become familiar with algebra tiles.

Use the area model to multiply and factor polynomials, complete the square and divide polynomials.

Learn how to transition from concrete (manipulatives) to abstract (symbolic notation).

---

# Opening

## Agenda

- + Opening
- + Algebra Tiles - What are they?
- + Combining Like Terms

- + Multiplying and factoring polynomials
- + Completing the Square
- + Polynomial Division
- + Closure

## CPM's Equity Principles

The goal of teaching is to help all students transition from dependent to independent learners.

Relationships are of vital importance.

Student uniqueness is an asset, not a deficit.

Reflection is a crucial part of growth.

---

# Welcome

## Working Agreements

Be willing to take **risks**.

Have a **visionary** mindset.

Stay **engaged**.

Explore and reflect on our **beliefs**.

Give **grace** to others and ourselves.

**Change takes time, effort, and support!**

---

# Algebra Tiles - What are they?

Icebreaker

**What do you notice?**

**What do you wonder?**

# Algebra Tiles - What are They?

## Naming of the Tiles

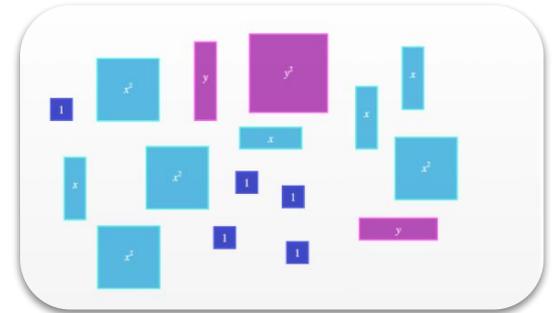

---

# Algebraic Expressions

## Explore: Combining Like Terms

1. Please open Lesson 4.3.1 in **Core Connections 2**.
  - a. Click on eBook tab
  - b. Click on CC2
  - c. Click on Chapter 4
  - d. Click on Lesson 4.3.1

# Expression Mats

Building with Opposite Space

One expression mat, two regions

Value -3 can be shown  
many different ways

Expression Mat

$+$  

The tile's value is what you see

---

The tile's value is the  
OPPOSITE of what you see

$-$  

# Comparison Mats

Which is Greater?

Left

A comparison mat divided into two horizontal sections. The top section is labeled with a "+" sign in the top-left corner and contains several red and black square blocks and two blue rectangular blocks. The bottom section is labeled with a "-" sign in the bottom-left corner and contains one blue rectangular block, one red rectangular block, and four black square blocks. Red circles and arrows highlight specific blocks and their relationships between the two sections.

Right

A comparison mat divided into two horizontal sections. The top section is labeled with a "+" sign in the top-right corner and contains one blue rectangular block, one red square block, one black square block, and two red rectangular blocks. The bottom section is labeled with a "-" sign in the bottom-right corner and contains two black square blocks, one red square block, one black square block, one red square block, and one red rectangular block. Red circles and arrows highlight specific blocks and their relationships between the two sections.

Which is greater?

# Equation Mats

$$x - 2 + 1 - (-2x + 1) = 5 - (-x + 1)$$

Solving Equations

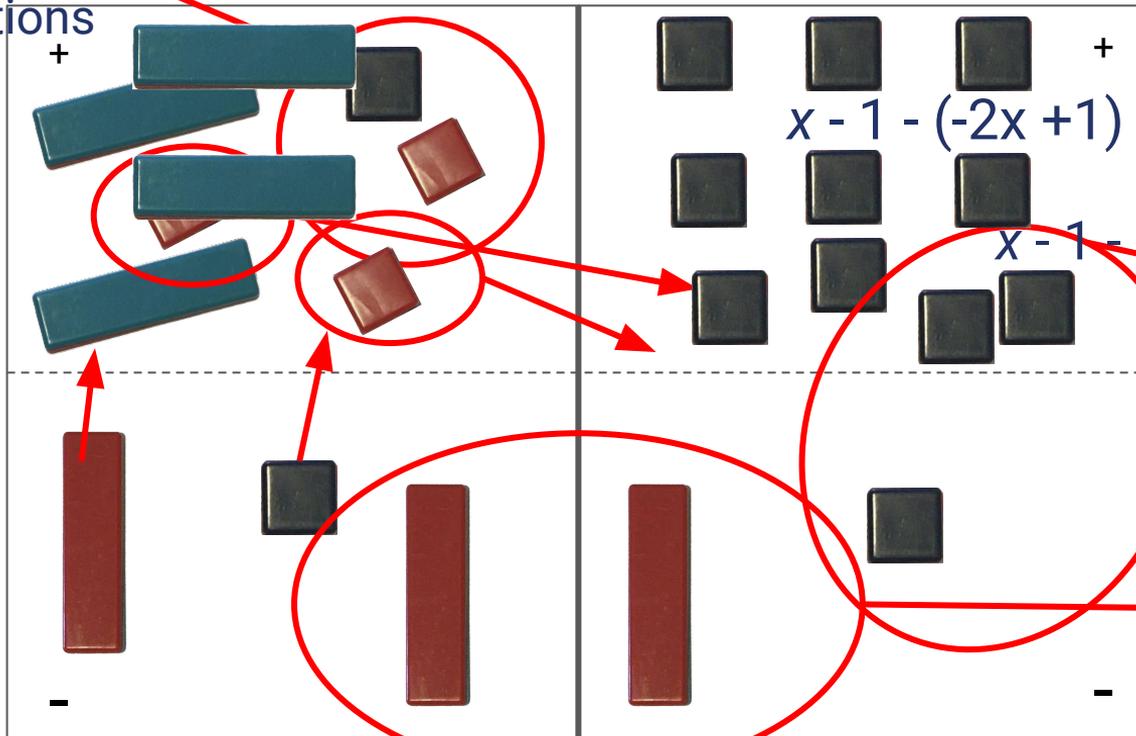

Zero Pairs

Removing Equal amounts

Flip

Flip again

Divide into equal amounts

$$x - 1 - (-2x + 1) = 5 - (-x + 1)$$

$$x - 1 - (-x + 1) = 4$$

$$2x - 2 = 4$$

$$2x = 6$$

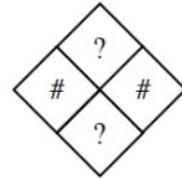

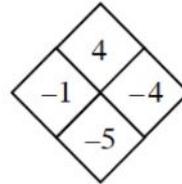

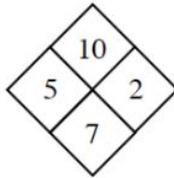

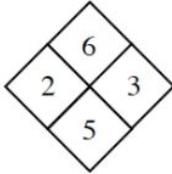

$$x = 3$$

# Multiplying and Factoring

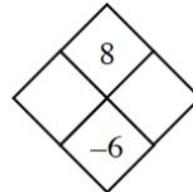

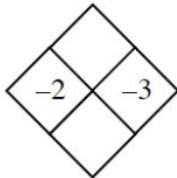

## Diamond Problems

Look for a pattern in the first three diamonds below. How could you find the missing numbers (?) if you know the two numbers (#).

Use the pattern you discovered to complete each diamond problem below.

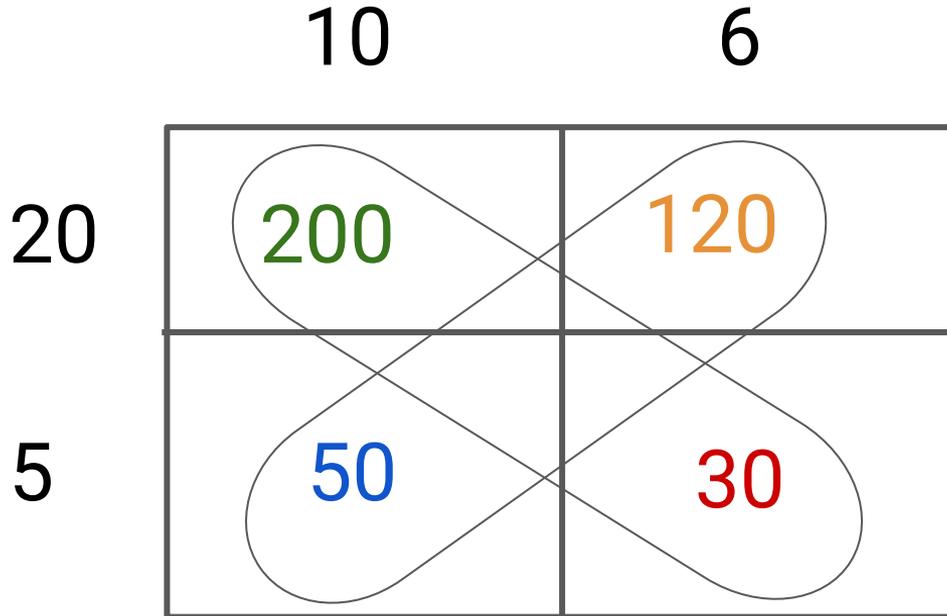

# Multiplying and Factoring

## Multiplying Using the Area Model

$16 \times 25$

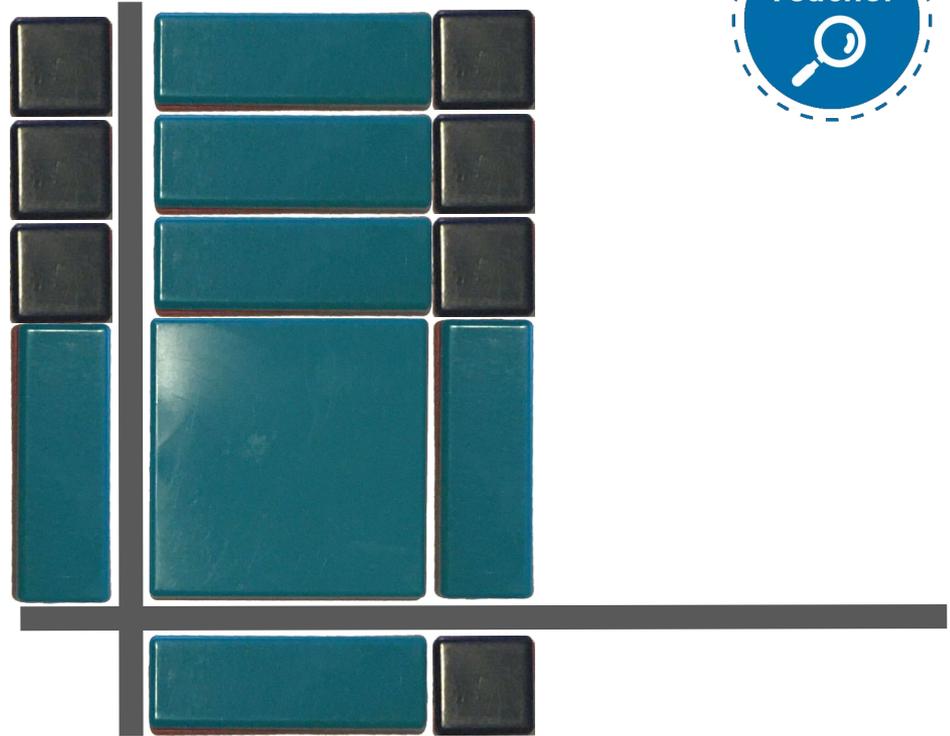

$$\begin{array}{r} 200 \\ 120 \\ 50 \\ +30 \\ \hline 400 \end{array}$$

# Multiplying and Factoring

## Multiplying Using the Area Model

Multiply  $(x + 1)(x + 3)$  using the tiles.

Write the solution as (a product) = (a sum)

$$(x^2 + 4x + 3) = (x + 1)(x + 3)$$

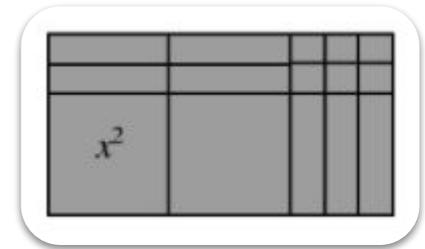

---

# Multiplying and Factoring

## Practice

1. Click on the Google Slide link posted in the chat.
2. Set your status to a thumbs up once you have opened the link.

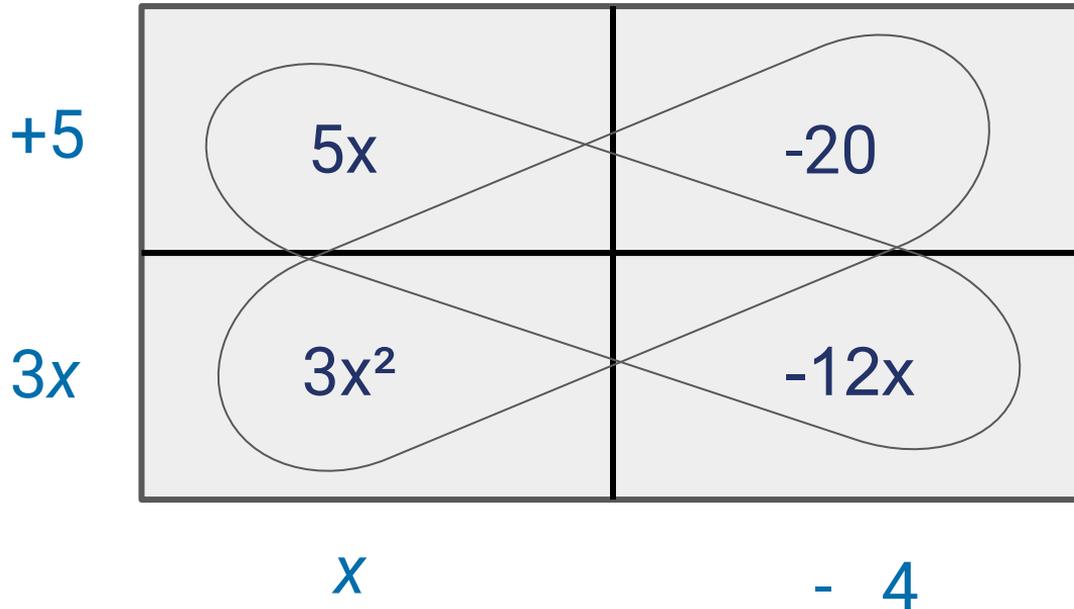

# Multiplying and Factoring

## Transitioning to Generic Rectangles

$$(3x + 5)(x - 4) = 3x^2 - 7x - 20$$

---

# Screen Break

Take a 5 min break

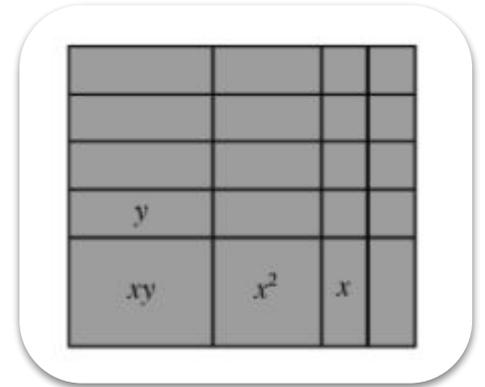

---

# Multiplying and Factoring

## Factoring Using Algebra Tiles

1. Click on the Google Slide link posted in the chat.
2. Set your status to a thumbs up once you have opened the link.

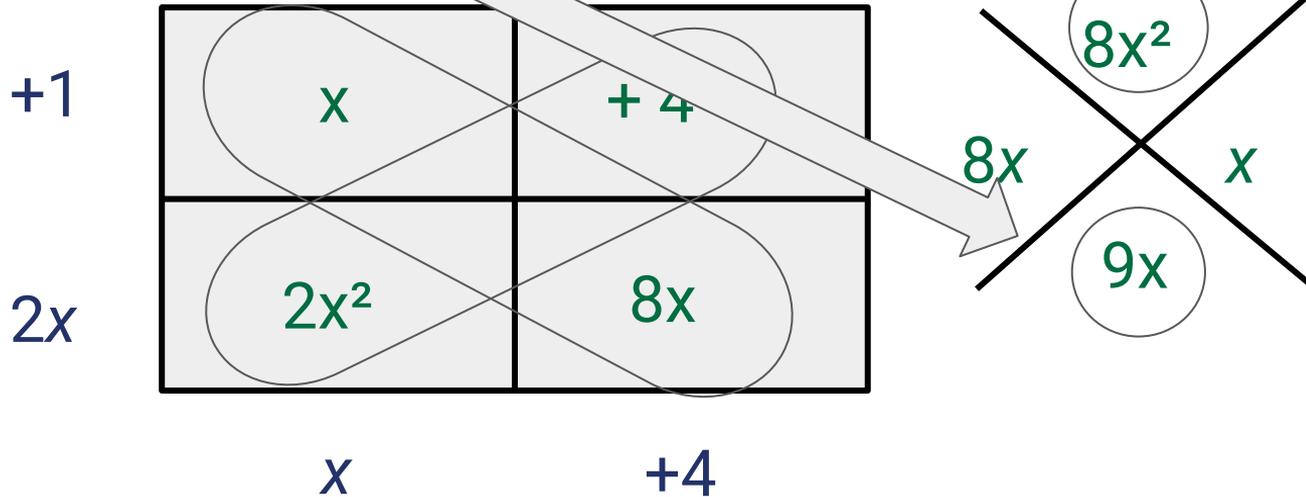

# Multiplying and Factoring

## Factoring Without Algebra Tiles

Factor:  $2x^2 + 9x + 4$

Answer:  $2x^2 + 9x + 4 = (2x + 1)(x + 4)$

# Completing the Square

## Completing the Square

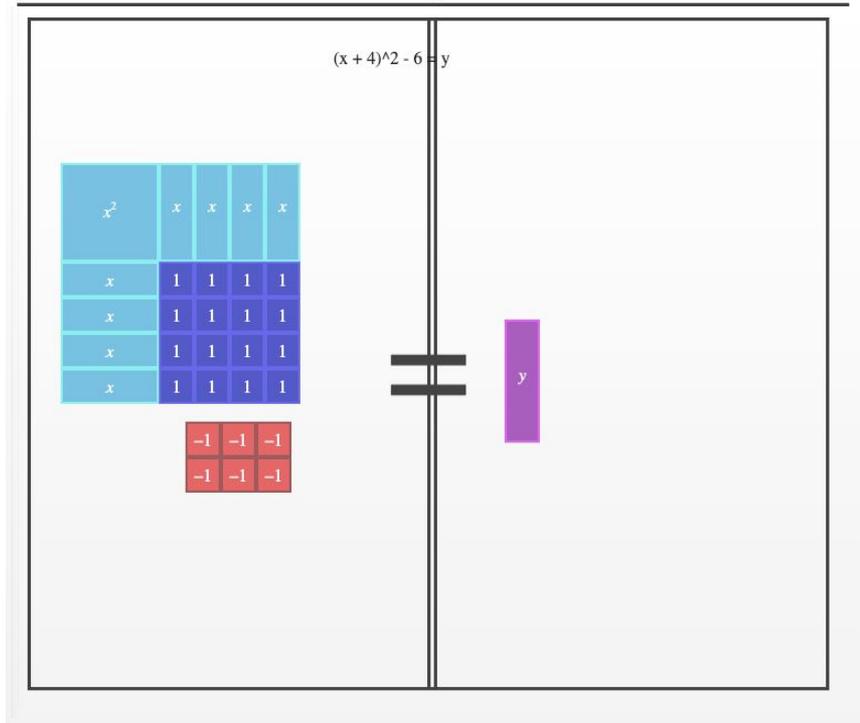

$$x^2 + 8x + 10 = y$$

$$(x^2 + 8x + 10) + 6 = y + 6$$

$$(x^2 + 8x + 16) = y + 6$$

$$(x + 4)^2 = y + 6$$

$$(x + 4)^2 - 6 = y$$

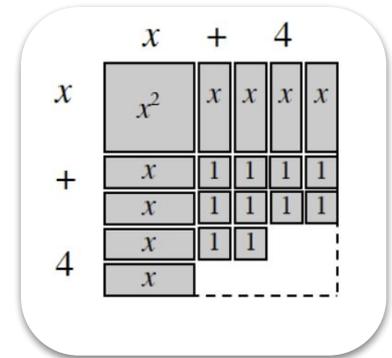

# Completing the Square

## Practice

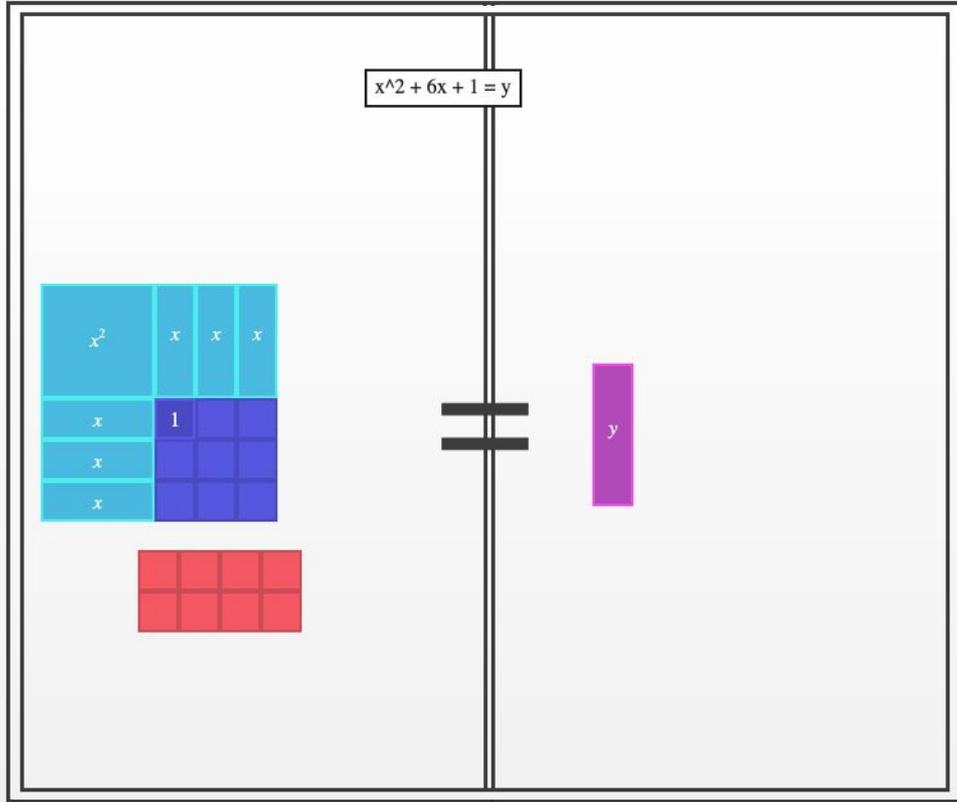

1. Click on the link posted in the Public Chat.
2. You will have 5 minutes to practice a Completing the Square problem.
3. This will be completed individually.

# Completing the Square

How did you do?

$$x^2 + 6x + 1 = y$$

$$(x^2 + 6x + 1) + 8 = y + 8$$

$$(x^2 + 6x + 9) = y + 8$$

$$(x + 3)^2 = y + 8$$

$$(x + 3)^2 - 8 = y$$

# Polynomial Division

1. Please open Lesson 3.1.4 in **Precalculus**.
  - a. Click on eBook tab
  - b. Click on Precalculus
  - c. Click on Chapter 3
  - d. Click on Lesson 3.1.4

Using an **area model**:

|       | $x^3$   | $-4x^2$ | $-8x$   | $+2$  | Remainder |
|-------|---------|---------|---------|-------|-----------|
| $x$   | $x^4$   | $-4x^3$ | $-8x^2$ | $+2x$ | 3         |
| $-2$  | $-2x^3$ | $+8x^2$ | $+16x$  | $-4$  |           |
| $x^4$ | $-6x^3$ | $+0x^2$ | $+18x$  | $-1$  |           |

Answer:  $x^3 - 4x^2 - 8x + 2 + \frac{3}{x-2}$

# Polynomial Division

## Debrief

$$\frac{6x^3 + 7x^2 - 16x + 10}{2x + 5} = (2x + 5) (\text{ ___?___ }) = 6x^3 + 7x^2 - 16x + 10$$

|      |         |         |       |   |
|------|---------|---------|-------|---|
| x    | $3x^2$  | $-4x$   | 2     |   |
| $2x$ | $6x^3$  | $-8x^2$ | $4x$  | 0 |
| 5    | $15x^2$ | $-20x$  | $+10$ |   |

$6x^3$     $+7x^2$     $-16x$     $+10$

Solution:  $3x^2 - 4x + 2$

---

# Closure

## Outcomes

## Participants will:

Become familiar with algebra tiles.

Use the area model to multiply and factor polynomials, complete the square and divide polynomials.

Learn how to transition from concrete (manipulatives) to abstract (symbolic notation).

# Closure
